1. Getting Started

Title Intelligence is an AI-powered application that automates the examination of title commitment documents. Upload a PDF, and the system will extract parties, property details, requirements, exceptions, and risk flags -- delivering a comprehensive analysis in under two minutes.

Logging In

Navigate to your organization's Title Intelligence URL in any modern web browser. Enter your email address and password on the login screen. Your account is created by your organization administrator -- there is no self-registration.

Dashboard

After login, you will see the Dashboard. It displays your subscribed applications. Click the "Open App" button on the Title Intelligence card to enter the application. You can also enable or disable app subscriptions from this screen.

Pack List

The main Title Intelligence screen shows all of your uploaded title packages. Each card displays the package name (or property address once extracted), its current status, and the date it was created. Click any card to open its detail view. Use the "New Pack" button in the top-right corner to start a new analysis.

2. Uploading a Title Package

A "pack" is a container for a single file that represents a title commitment. The file is analyzed as one document.

How to Upload

1. Click "New Pack" from the pack list screen.
2. Drag and drop your file onto the upload area, or click to browse.
3. Review the selected file. You can remove it and select a different one before submitting.
4. Click "Analyze Package" to begin processing.

Supported File Formats

- PDF (recommended) -- the system processes multi-page PDFs natively
- PNG and JPEG images -- useful for scanned single pages

Tip

For best results, upload the full title commitment as a single multi-page PDF rather than individual page images. This preserves document structure and produces more accurate section detection.

File Limits

- Maximum file size: 25 MB
- One file per pack
- The pack name is auto-generated from the filename, then updated to the property address once extracted

3. Pipeline Processing

After upload, the system runs a four-stage analysis pipeline automatically. You can monitor progress in real time on the pack overview page.

Stage 1: File Validation

Confirms that uploaded files exist and are readable. This stage completes almost instantly.

Stage 2: PDF Rendering

Extracts text from each page and generates page images for the document viewer. Pages with very little text (e.g., blank separator pages) are automatically classified as blank and excluded from further analysis.

Stage 3: Title Examination

The core AI analysis stage. The system reads each page, transcribes scanned content, detects document sections (Schedule A, B-I, B-II, C, etc.), extracts structured data (parties, property details, requirements), and identifies risk flags. Progress is shown as batch counts (e.g., "3/6 batches, 12 flags").

Stage 4: Finalization

Generates the executive summary, updates the pack name to the property address, and pre-caches the PDF report for instant download. Once complete, the pack status changes to "Completed" and all features become available.

Processing Time

A typical 50-page title commitment completes in under 2 minutes. The page auto-refreshes every 3 seconds while processing -- no need to manually reload.

4. Document Viewer

The Document Viewer provides a detailed, page-by-page view of the uploaded document with extracted text and section overlays. Access it by clicking "View Pages" from the pack overview.

Layout

The viewer has two panels:

- Left panel: Thumbnail strip for quick page navigation. Click any thumbnail to jump to that page.
- Center panel: Full-size page image with zoom controls.

Thumbnail Indicators

- Page type badges appear on thumbnails: "blank" (gray), "cover" (blue), "signature" (amber).
- An amber dot on the top-right corner indicates a section boundary on that page.

Zoom Controls

Use the toolbar buttons to zoom in (+), zoom out (-), or reset to fit. Zoom levels range from 50% to 200%.

Sections Panel

Toggle the "Sections" button in the toolbar to see detected document sections (e.g., Schedule A, Schedule B-I, Schedule B-II, Schedule C, Legal Description, Endorsements). Click a section name to jump to its first page.

5. Analysis Results & Flag Review

The Results page is the primary workspace for reviewing the AI analysis. Access it by clicking "View Results" from the pack overview.

Risk Summary

At the top of the page, four color-coded boxes show the count of flags by severity: Critical (red), High (amber), Moderate (orange), and Standard (indigo). A narrative summary below highlights the total number of open items and calls out critical and high-priority counts.

Extracted Information

The header displays key data extracted from the document: property address, commitment number, effective date, and issuing title company.

Exceptions & Required Actions

Below the summary, a filterable list displays all identified flags (exceptions). Use the severity filter tabs (All, Critical, High, Moderate, Standard) to narrow the list. Each flag appears as a numbered, expandable card (EX-001, EX-002, etc.).

Flag Card Details

When you expand a flag card, you will see:

- Severity badge -- color-coded indicator of urgency
- Title and description -- concise explanation of the issue
- Examiner's Note -- AI-generated analysis providing context and recommended action
- Evidence -- clickable page references with quoted text snippets from the document
- Quick action buttons -- Approve, Reject, or Escalate the flag

Reviewing a Flag

1. Expand the flag card to read the full description and examiner's note.
2. Click any evidence page link to view the source page in the document viewer.
3. Choose an action: Approve (acceptable), Reject (needs resolution), or Escalate (needs legal review).
4. Optionally select a reason code (e.g., "Standard Exception", "Resolved Prior to Closing").
5. Add a note in the note field for additional context.

Review Persistence

Your review decisions are preserved even if the package is re-analyzed. Flags that match the same type, severity, and page references will retain their previous review status.

Flag Detail Dialog

Click "View full detail" on any flag card to open a modal dialog with the complete flag information, evidence list, and review form. This is useful for complex flags that require careful examination.

Report Sections

Below the flags table, the results page includes additional report sections:

- Schedule B Section -- standard and specific exceptions with severity tags
- Schedule C Section -- requirements list with priority indicators and satisfaction status
- Warnings Section -- key warnings and observations for critical issues
- Checklist Section -- pre-closing checklist items

6. AI Chat Assistant

The AI Chat allows you to ask natural-language questions about the analyzed document. Open it by clicking "AI Chat" from the pack overview page.

How to Use

1. Click "AI Chat" to open the chat panel on the right side of the screen.
2. Select one of the suggested questions, or type your own in the input field.
3. The AI responds in real time with streaming text.
4. Responses include page citations -- click any citation badge to jump to that page.
5. Ask follow-up questions to drill deeper into specific topics.

Suggested Questions

When the chat panel opens, several pre-built questions are available:

- "What are the key parties involved in this transaction?"
- "Are there any liens or encumbrances on the property?"
- "What exceptions are listed in Schedule B?"
- "What is the legal description of the property?"
- "Are there any requirements that need to be met before closing?"
- "What is the effective date of this commitment?"

Tip

The AI has access to the full text of every page in the document plus all extracted data. Ask specific questions for the most useful answers. You can clear the conversation at any time using the trash icon in the chat header.

7. Exporting Reports

Generate a comprehensive PDF report of the analysis to share with stakeholders, attach to closing files, or archive for compliance.

How to Export

1. Navigate to the results page for a completed pack.
2. Click "Export Full Report" in the header.
3. The PDF downloads to your device automatically.

Alternatively, navigate to the Export tab from the pack detail page.

Report Contents

The exported PDF includes:

- Title page with property address
- Transaction details: parties, policy amounts, effective date, commitment number
- Risk summary with severity breakdown
- Full list of exceptions with page references and AI explanations
- Schedule C requirements with satisfaction status
- Key warnings and observations
- Pre-closing checklist
- Legal disclaimer

Note

The PDF report is pre-generated when the pipeline completes, so the download is instant. If you re-analyze a pack, the report is regenerated with the latest results.

8. Re-Analyzing a Package

You can re-run the analysis on a completed pack at any time. This is useful if the system has been updated or if you want a fresh examination.

How to Re-Analyze

1. Open the results page for the completed pack.
2. Click the "Re-analyze" button (refresh icon) in the header.
3. The pipeline runs again. Progress is shown inline on the results page.
4. Once complete, the results update in place.

What is Preserved

- Flag review decisions (approved, rejected, escalated) are preserved for flags that match the same type, severity, and page references.
- Notes you added to flags are also preserved.
- The AI cache ensures that identical documents with identical configuration produce identical results.

9. Managing Packages

Deleting a Pack

To delete a pack, click the delete icon on the pack card in the list view. A confirmation dialog will appear. Deleting a pack permanently removes all associated data: files, pages, extractions, flags, reviews, and chat history.

Pack Statuses

- Uploading -- files are being uploaded to the server
- Processing -- the four-stage pipeline is running
- Completed -- analysis is finished; all features available
- Failed -- an error occurred during processing (error details shown on the overview page)

10. Severity Reference

Every risk flag is assigned a severity level. Severity is determined by the AI and then adjusted by deterministic rules to ensure consistency.

Severity	Color	Meaning
Critical	Red	Must be resolved before closing. Indicates a title defect that would prevent insurable title.
High	Amber	Requires prompt attention. Significant risk that should be addressed before closing.
Moderate	Orange	Should be reviewed. May require action depending on transaction context.
Standard	Indigo	Informational. Routine items that are typically acceptable as-is.

Common Flag Types

- Unresolved Lien -- an outstanding lien without evidence of release (floor: high)
- Unreleased Mortgage -- a mortgage or deed of trust without recorded satisfaction (floor: high)
- Chain of Title Gap -- a break in the ownership chain between consecutive transfers (floor: high)
- Name Discrepancy -- party names that are similar but not identical across documents (floor: medium)
- Missing Endorsement -- a required policy endorsement not found in the commitment
- Unacceptable Exception -- a Schedule B exception that may be objectionable
- Requirement Missing Proof -- a Schedule C requirement without evidence of completion
- Cross-Section Mismatch -- inconsistent information across different document sections (cap: medium)
- Trust Issue -- gaps in trust documentation or trustee authority (floor: high)
- Estate Issue -- probate, inheritance, or deceased party concerns (floor: high)

11. Keyboard Shortcuts & Tips

Document Viewer

- Left arrow key: previous page
- Right arrow key: next page
- Escape key: close viewer and return to pack overview

Chat Panel

- Enter key: send message
- Click the stop button to cancel a streaming response

General Tips

- Upload full multi-page PDFs for best section detection accuracy.
- Use the severity filter tabs on the results page to focus on critical items first.
- Click evidence page links to quickly jump between the flag list and the source document.
- Add notes to flags as you review them -- notes persist across re-analysis.
- Use the AI Chat to ask clarifying questions about specific clauses or requirements.
- Export the PDF report after completing your review to share with the closing team.
- The system caches AI results, so re-opening a completed pack is instant.
